

ReEmployAbility and Maplytics team up for efficient “Return to Work Solutions” with optimized routing to Area of Service.

From the first correspondence, our experience with the Maplytics team has been a pleasure. The Maplytics Team is friendly, knowledgeable and responsive, and they were committed to ensuring their tool met my business needs.

In summary –

Big fan of @Maplytics Auto Search on form load!

Increased visibility with zero extra effort added measurable value in less than a week.

Company Overview

About ReEmployAbility

ReEmployAbility is a B2B Service Industry company, supporting Insurance Companies and Employers nationwide. It provides simple, fast, safe return-to-work solutions to help control the rising costs of workers’ compensation and non-occupational disability while positively influencing the lives of injured workers nationwide. Our proprietary return-to-work program, Transition2Work, offers employers a cost-effective solution to modified light-duty assignments and reduces workers’ compensation and non-occupational disability claim costs while giving the injured worker time to heal. The Transition2Work program utilizes local not-for-profit partners to find light-duty opportunities, benefitting injured workers’ community and local philanthropic goals.

Industry: Insurance

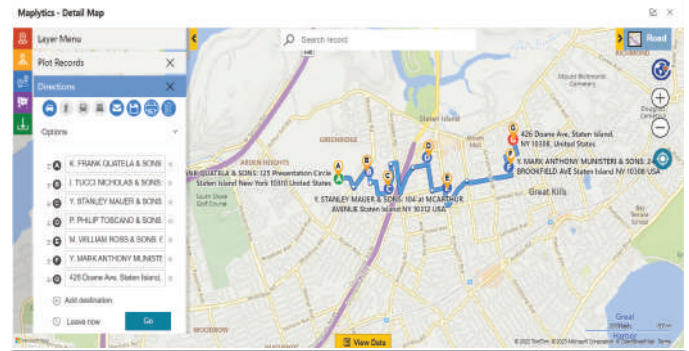

Specialties: Workers' Compensation,
Disability Solutions, Transitional
Employment

Business Challenge

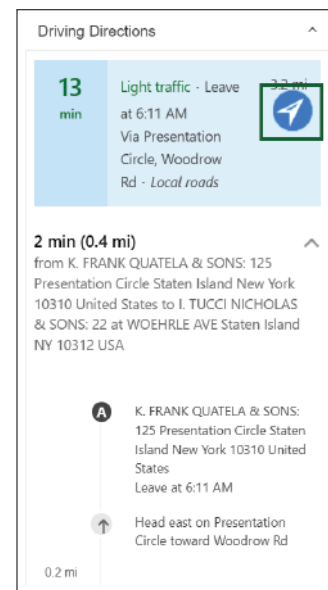

- Our processes at ReEmployAbility required a robust mapping solution to help map the most efficient route for marketing and travel, plot and expand our national not-for-profit database, and most importantly, map the most efficient route to light duty assignments for the injured workers in our program.
- We are committed to securing light duty assignments that are close to the injured workers' home and comparable to their normal daily commute.
- A reliable mapping solution is an integral part of our return to work program process

Why Maplytics

- The smart features within Maplytics allow our organization to make smart business decisions and automate multiple aspects of our business processes.

- Features such as automated driving directions, auto search on form load, and custom icons based on record criteria help our team to deliver the best possible outcomes efficiently and accurately for our customers.

- The features enabling easy location mapping and deriving end-to-end navigation directions have saved the organization's staff an average of **12 minutes per appointment travel, or approximately 16 hours per day, resulting in an operational savings of \$6,000 per month.**
